

ENG23 3031 & 523331

System Analysis and Design

การวิเคราะห์และออกแบบระบบ

Lecture 4: Sample UI and Activity Diagram

Checklist before Next Steps

1. Clear on User Requirement and User Story
2. Clear on Business/System Use Case Diagram

Turn Use Case into System Design

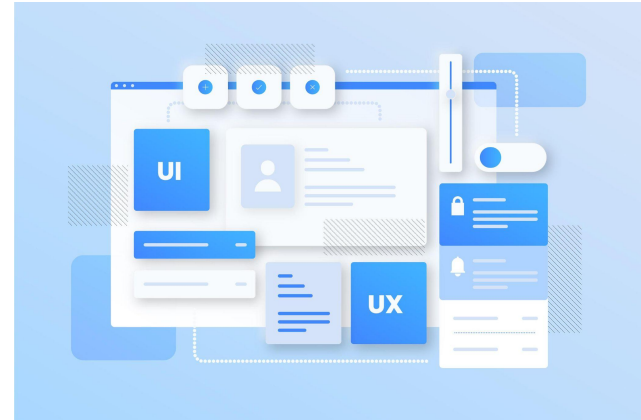

1. Sample UI Design
 - To show possible interface to let user use the system
2. Activity Diagram
 - To show the process how use will interact with the system and how the system's process
3. Class (Entity) Diagram
 - To show how the system process and store information
 - To show how each system connect and work together

Entity Analysis

- **Entity** = What's data that need to store for the system to work
- Analysis from User Requirement on what the expectation of output

Sample UI Design

To visualize what the user interface look like and how user will interact with the system

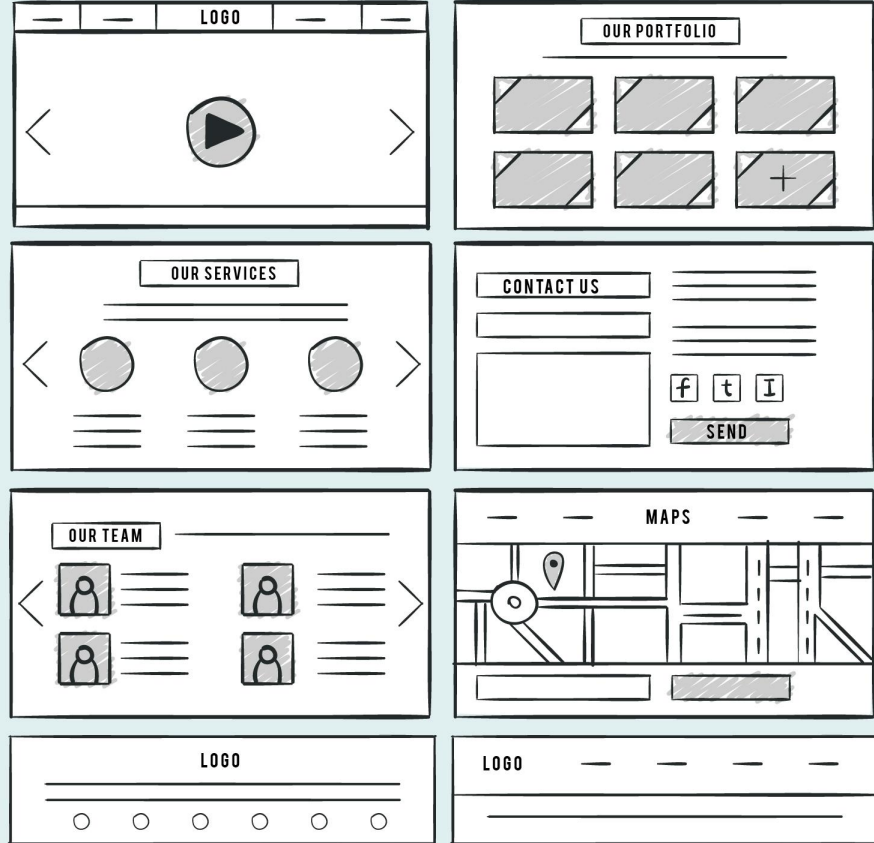

UI Design Pattern

- **Wireframe**: Commonly used to layout content and functionality on a page which takes into account user needs and user journeys
- **UX Flow**: Diagram that shows the path a user goes through when using your product from the start point to the final interaction.
- **Prototype**: Demonstrates a product's design and functionality to stakeholders, clients, and potential users.

Wireframe

- Draw from paper/software
- Visualize the basic or concept of how the system's work

WEB DESIGN ELEMENTS

Activity Diagram

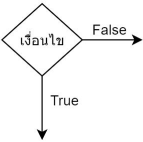

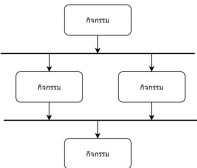

The UML diagram that can show how user interact with the system and also show how the system work behind the scene

- 1 System Activity Diagram -> 1 Output in Database -> 1 Output to UI screen
- What's process for each step that user use the UI system
- The process for each input

Activity Diagram

ACTIVITY DIAGRAM

สัญลักษณ์	ชื่อ	คำอธิบาย
	Initial State / Start Point	จุดเริ่มต้น
	Activity or Action State	กิจกรรม
	Object Flow Guards	การไหลของกิจกรรม
	Guards	กรณีมีเงื่อนไข
	Synchronization	กรณีมีการทำกิจกรรมพร้อม ๆ กัน
	Final State / End Point	จุดสิ้นสุด

Checklist for Activity Diagram

1. Need to design sample UI before doing activity diagram
2. Need to contain both start and end process
3. 1 System Activity Diagram -> 1 Output in Database and 1 Output to UI screen
